## **WEATHER SYNOPSIS BY REGION**

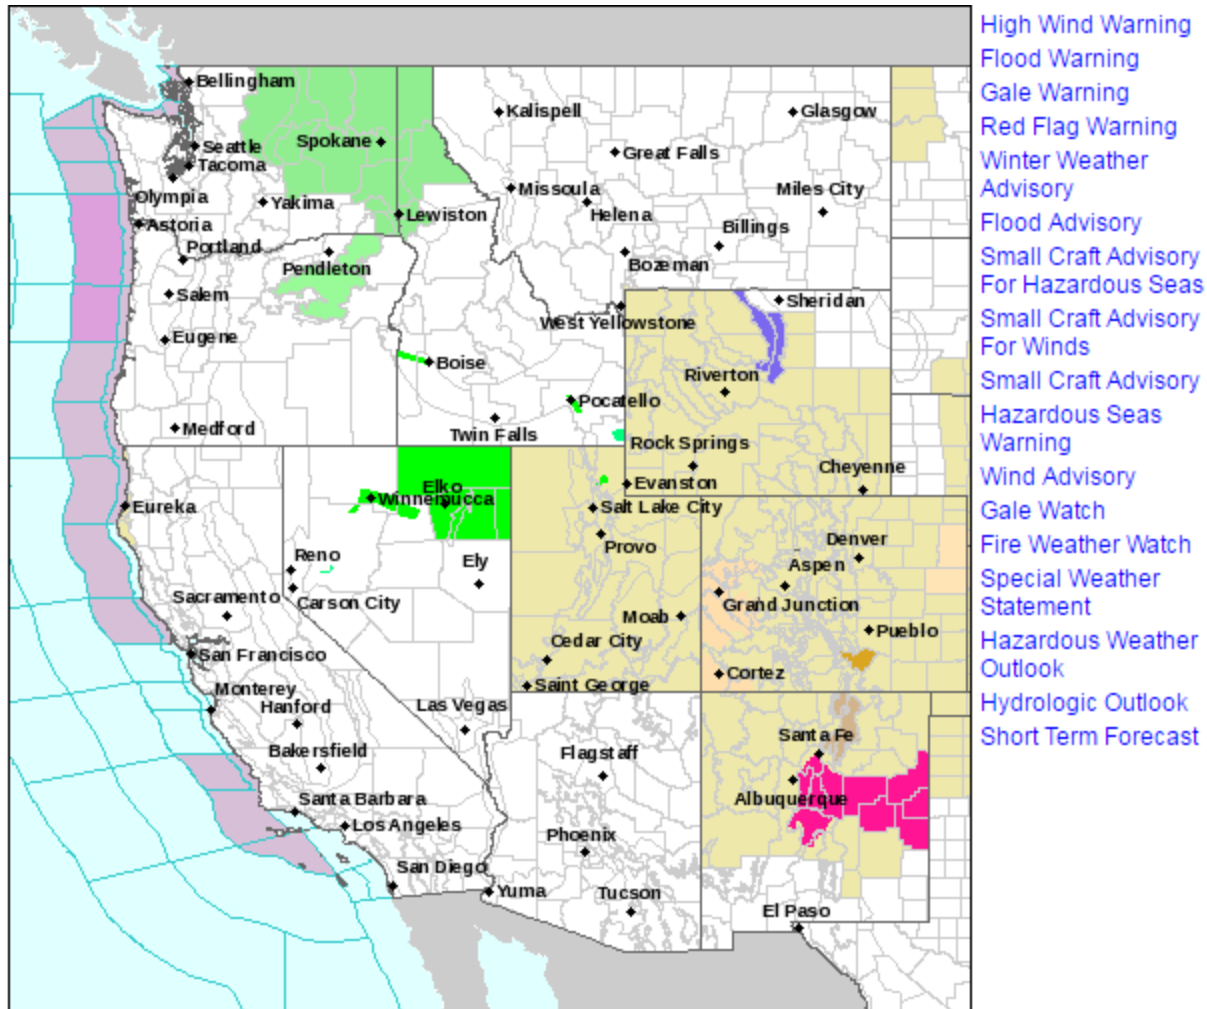

### **NORTHERN CALIFORNIA**

Another system off shore moving toward land will come ashore this morning and spread precipitation inland through tonight. Mountain showers are likely to linger Thursday, but also be decreasing. Friday through Sunday looks dry throughout most of the region, but a low pressure trough passing through Saturday will probably keep some showers going in the far northern areas. Confidence in possible events early next week is low, but another, wetter system may move through the region Monday with more light precipitation, mostly in the northern and eastern areas. Snow levels with these systems will remain seasonably high at 5000-6000 ft in the north to 7000-8000 ft in the south. There will be areas where gusty southerly winds develop Wednesday afternoon and evening. Temperatures this weekend will be above seasonal normals with afternoon highs right around 80 possible in the warmest inland valley areas Friday and Saturday.

### **SOUTHERN CALIFORNIA**

West winds of 20 to 30 mph with gusts to 50 mph will ease today and then pick back up again and become northwest this evening through Thursday afternoon. Temperatures will remain near to a little above normal through Thursday as zonal flow continues across the region. Maximum temperatures will be in the upper 40s and 50s across the mountains and mid 60s to mid 70s in the valleys today, and then be in the 50s to low 60s across the mountains and upper 60s and 70s in the valleys today and Thursday. Maximum temperatures will jump to 10 to 20 degrees above normal and humidity will drop into the single digits and teens Friday and Saturday as a strong ridge of high pressure builds into California from the Pacific Ocean. North winds of 20 to 30 mph with gusts to 50 mph will surface across the South Coast of Santa Barbara and the Grapevine Thursday night. These winds will become northeast to east 15 to 25 mph with gusts to 40 mph over the mountains and below the canyons and passes of Southern California Friday morning. Winds will decrease Friday afternoon and become light Friday evening through Saturday afternoon. A Pacific trough will drop down the West Coast bringing a cooling trend and an increase in humidity Sunday through early next week. Strong and gusty westerly winds will once again occur over the wind prone mountain and desert areas Saturday night through early next week.
